eProcessing Network Integrates ePNJPOS with VeriFone

Flagship Product Now Supports Top Pin Pad

January 12, 2010 – Houston, Texas. eProcessing Network, LLC, the industry’s leading independent payment gateway and software development company, announced today that it has added another PIN debit solution to its popular ePNJPOS software with the VeriFone PINpad 1000SE.

In response to feedback received from its resellers, eProcessingNetwork has expanded its range of services and added the PINpad 1000SE to the impressive roster of devices supported by ePNJPOS. The PINpad 1000SE is PED certified, cost-effective, and available for debit key injection from major deployment centers.

“We are very pleased to offer even more merchant payment solutions and flexibility to our reseller channel by adding one of the industry’s most popular PIN pads to ePNJPOS’s catalog,” says Steve Sotis, President of eProcessing Network. “The VeriFone PINpad 1000SE is a perfect compliment to ePN’s processing solutions and will provide a strong sales tool for resellers in a highly competitive market.”

Other devices supported by ePNJPOS include various USB Magstripe readers, Bluetooth Reader/Printer combinations, check readers and imagers, and all standard Windows-compatible printers for receipts. The ePNJPOS solution benefits resellers by increasing merchant opportunities through a wide range of payment types (including gift card and loyalty), lowering processing rates with swiped and PIN debit transactions, supporting unlimited users per ePNJPOS installation, robust gateway reporting, easily integrating transactions into QuickBooks® with the ePNPlugIn, and enabling merchants to process real-time transactions *anywhere* Internet access is available.
