ePNSync - Product Announcement!

The new, fast selling ePNSync is a lighter version of ePNPlugin for QuickBooks. The new software is designed for those merchants that prefer not to use the invoicing and payment solution in QuickBooks Pro, Premier or Enterprise software.

ePNSync is being offered at a low monthly rate with a very modest setup fee making it simple to engage merchants to use this robust business solution.

How it works... ePNSync allows the merchant to setup the exact time of day for the ePN secure network to push daily transactions from one of the many payments solutions offered today.

A hot market for ePNSync is for the mobile merchant market. Mobile merchants are busy people and ePNSync provides a timesaving solution because transactions are securely downloaded directly into their supported version of QuickBooks.

Start selling ePNSync today; it is another very affordable solution from eProcessing Network. And this is a fabulous residual income opportunity for Resellers

Call your Sales Channel Development Manager (**SCDM**) for additional details!!!
